

Cleaning in commission

Technical cleanliness is an important factor in many areas of modern production plants. As part of our industrial parts cleaning offering, we deliver to you a variety of different cleaning methods, all in accordance to your very own needs, configured and customized to your requirements.

Contamination analysis

Cleanliness is an essential quality characteristic in production chains during manufacturing. Based on increasing requirements in the industry, more and more companies request detailed evidences to the degree of cleanliness of components. DGS offers residual dirt and cleanliness analysis according to VDA 19 and ISO 16232 as well as analysis in accordance with your specific customer and company standards.

Assemblage

The cleaning of components between the various assembly steps of industrial components is of utmost importance to many businesses. And it has to fit in individual industrial working environments. We ensure the overall cleanliness of your assembly during our whole process. To guarantee a perfect cleanliness of your components even after assembly, we offer a professional, clean packaging of your individual components in a clean environment.

Packaging and shipping

DGS packs all components according to your requirements. Our target is to maximize the quality of the components from collection, storage, cleaning, and transportation right up to the delivery to the desired destination. Our customer-friendly solution also includes the complete transport chain - from collection and storage the components to a reliable delivery. A one-stop shop!

Your benefits:

- Professional planning
- High-quality accomplishment
- Environmentally friendly technology
- Outstanding value-add

We respond to our customer's needs flexibly with our unique and customized solutions. We look forward to becoming your competent partner.

We provide you:

- **Know-how**
in the economic realization of high performance products
- **Customer solutions**
tailored to your requirements
- **Service**
by competent consulting and technical design

Industrial cleaning of parts

Component cleaning from different production areas

DGS is specialized in the cleaning of components from cutting and non-cutting manufacturing. Our customers are among others from the machinery and plant engineering, as well as the automotive industry. We clean production components and assemblies in the following fields and industries:

- Components of machining centres
- Components of electrical engineering
- Components of precision engineering
- Drilling, turning and milling parts
- Stamped, drawn and extruded parts
- Parts from engine and electric engine construction

We also offer the cleaning of all batch sizes and components, including collection, purification and delivery. Your products can also be subjected to a professional contamination analysis in accordance with ISO 16232 and VDA 19.
